

Page 1: Introduction

Python is a high-level, interpreted language. Features: simple syntax, portability, large standard library, dynamic typing.

Page 2: Variables & Data Types

Variables need no declaration. Types: int, float, str, bool, list, tuple, set, dict.

Page 3: Control Flow

if/elif/else for decisions. for and while loops. break, continue, pass alter loop execution.

Page 4: Functions & OOP

Define functions with `def`. Use `return`. Classes encapsulate data and methods. `__init__` initializes objects.

Page 5: File Handling & Exceptions

Use `open()` with modes `r,w,a`. Prefer with statement. Handle errors using `try, except, finally`.
